

Delivering intelligence that matters

Enterprise AI for high-assurance domains, trusted by financial institutions and the public sector. Sovereign by design, and delivered by our forward deployed engineers working inside your teams.

< Solutions for high-assurance domains >

MOZN AI Platform is focused on delivering intelligence that drives positive ROI, in the most compliant, fast-tracked and effective way.

01 Predictive & Decision Intelligence

Detect → Anticipate → Decide

Interprets enterprise performance and signals continuously, so leaders see change early, understand potential outcomes and decide with evidence.

02 Enterprise Knowledge & Automation

Connect → Understand → Execute

Builds an intelligent brain for the organization, so people and agents can understand it, reach its institutional memory and execute work.

03 Fraud & Investigation Intelligence

Detect → Uncover → Investigate

Uncovers, prevents and investigates fraud and broader threats by connecting signals, entities and activities that look legitimate in isolation.

04 Finance & Budget Intelligence

Plan → Monitor → Anticipate

Improves the accuracy and speed of financial planning, monitoring and fiscal decision-making, continuously rather than periodically.

05 Procurement & Supply Chain Intelligence

Analyze → Manage → Optimize

Improves procurement decisions, supplier performance and the movement of goods and resources across the supply network.

06 Regulatory & Governance Intelligence

Monitor → Assess → Remediate

Keeps you current on changing regulatory requirements, what they mean for your policies and controls, and what has to close.

Built for the sectors where the stakes are highest.

MOZN AI Platform deployed on sovereign infrastructure, addresses critical challenges to deliver maximum value.

Public Sector

- Policy simulations for decisions impacting economy, populations, the future
- Continuous budget monitoring, and re-planning when funding assumptions change
- Institutional memory and rich insights for swift judicial processes to public services
- Subsidy, benefits and grant fraud, waste and abuse
- Collusion and price anomalies across public procurement

Defense

- Scenario modelling and impact prediction of decisions, assumptions and external changes
- Supply and distribution optimization under real constraints
- Threat analysis across fragmented signals, entities and relationships

Banking

- Simulations for product and policy changes to make informed, high-impact decisions
- An agentic workbench that shortens investigation cycles
- Hidden relationship and network fraud across accounts and entities
- Regulatory changes mapped to your own workflow, policies and controls
- Enterprise knowledge and memory across Arabic and English records

Insurance

- Scenario and impact modeling for risk exposure
- Swift mapping of regulatory changes to their impact
- Claims fraud rings uncovered through entity and relationship intelligence
- Provider and supplier risk scored on performance, not price alone

NBFI & FinTechs

- Agentic workflow automation across a thin operations stack
- Entity resolution, risk scoring and anomaly detection from day one
- Compliance gaps found and remediation tracked through to closure
- Signals and next best action, instead of another dashboard

/ HOW WE DO IT

Forward deployed engineering (FDE)

MOZN

MOZN AI Platform

An enterprise AI platform that connects data and knowledge, understands organizational context, reasons across it, and enables AI to act.

MOZN FDE pod

120+ FDE experts

AI engineers, data scientists, strategists and change managers, embedded with you.

Your Organization

Your domain experts

Deep internal know-how of the needs, constraints, nuances and workflows that no vendor can guess from the outside.

Successful AI Transformation

Governed, sovereign, owned by you, and giving positive ROI.

About Us

MOZN is an enterprise AI company empowering financial institutions and government organizations with intelligence that matters. Purpose-built for high-assurance domains, MOZN delivers solutions for financial crime prevention, knowledge intelligence, and decision intelligence. Through its AI platform, MOZN combines sovereign AI capabilities, advanced AI products, and forward-deployed engineering expertise to connect data, generate intelligence, and drive measurable outcomes.

Headquartered in Riyadh, MOZN serves customers across the region and beyond, helping organizations solve complex challenges where trust, compliance, and security are non-negotiable.
